ABOUT:

E-COMMERCE SALES DATA ANALYSIS-

~This project focuses on analyzing e-commerce sales data using Big Data technologies. The dataset contains information about products, categories, prices, quantities, and purchase dates.

~The data is stored in HDFS, processed using MapReduce, and analyzed using Hive queries to generate meaningful insights such as top-selling products, total sales, and peak sales periods.

~The project demonstrates how large datasets can be efficiently handled and analyzed using distributed computing techniques.

PROBLEM STATEMENT:

The objective of this project is to analyze e-commerce transaction data using Hadoop tools in order to identify key business insights.

The system aims to:

- **Identify top-selling products**
- **Calculate total sales revenue**
- **Analyze category-wise performance**
- **Determine peak sales dates**

This is achieved using HDFS for storage, MapReduce for data processing, and Hive for querying and analysis.
